

## Talk to text

FESR software is loaded on all corporate computers. All you need is an account, which is provided during your training session.

You can dictate using an installed microphone or via the Mobile Microphone application on your smart device.

## Documents

You can create reports from scratch or from pre-loaded and customized templates.

You can then

- view
- edit
- save
- e-sign

your report at anytime.

Once signed, it is instantly distributed and available for viewing.

## Training

Training is one-on-one and can be face to face or remote. It takes 1.5 to 2 hrs.

Once trained, your profile follows you. The more you use the system, the more it learns and adapts to your voice.

Fraser Health is currently providing training for medical staff and nurse practitioners across all acute care sites, which will occur over the next year.

## BONUS

Earn 2 MainPro+® OR Section 3 CME credits for training.

FESR software is available to you to use at your private practice or home, if you use it for hospital dictation.

No more writing!

Saves time!

To register for training now, contact Christopher Vilches at [cvilches@providencehealth.bc.ca](mailto:cvilches@providencehealth.bc.ca) OR 604-908-0723
